PROFESSIONAL PROFILE

Field-proven Telecommunications & Systems Infrastructure Engineer with **15+ years of practical experience** deploying, aligning, troubleshooting, and maintaining critical communications hardware, satellite ground stations (VSAT), wireless microwave links, and enterprise networking equipment. Extensive track record supporting remote, maritime, and challenging territorial sites with 24/7 high-availability requirements. Proven ability to quickly diagnose RF, power, hardware, and network layer failures, execute rapid field replacements, and implement automated monitoring. Fully aligned with Australian **Work Health & Safety (WHS)** standards, safe work at heights, risk assessment procedures, and remote site protocols.

CORE TECHNICAL COMPETENCIES & EQUIPMENT MATRIX

Satellite & Telecommunications	**VSAT Terminals (C-band, Ku-band):** Antenna assembly, dish pointing, polarization tuning, BUC, LNB, transceivers, feedhorn calibration, satellite modems (iDirect, Hughes). Microwave links, radio frequency (RF) equipment, coax & twisted-pair cabling, optical fiber termination.
Networking & Field Hardware	**Routing & Switching:** Cisco, MikroTik, Ubiquiti, TP-Link. TCP/IP, VLAN segmentation, VPN (WireGuard, OpenVPN, IPSec), firewall rules, QoS, bandwidth management. Rack mounting, patch panels, cable trays, PDU/UPS power backup systems, CCTV surveillance.
Systems & Automation	**Servers & Scripting:** Linux (Ubuntu, Debian, CentOS), Windows Server (Active Directory, DNS, DHCP), virtualization (Docker). Automated monitoring with Zabbix and SNMP. Python scripting for telemetry, system diagnostics, and automated alerts.
Work Health & Safety (WHS)	Trained in safe work method statements (SWMS), job safety environment analysis (JSEA), working at heights protocols, electrical isolation awareness (LOTO), PPE compliance, and remote lone-worker safety procedures.

PROFESSIONAL EMPLOYMENT HISTORY

Systems Integration & Automation Engineer · Independent Practice / Freelance — Jan 2024 — Present

Delivering turnkey field automation, systems integration, and remote infrastructure monitoring solutions.

- Engineered custom remote monitoring agents in Python utilizing SNMP and telemetry APIs to track network latency, packet loss, and hardware uptime for distributed client sites.
- Integrated cloud infrastructure, VPN tunnels, and notification bots with real-time alerting to minimize mean-time-to-repair (MTTR) during hardware disruptions.
- Configured reliable local network infrastructure and backup power setups for high-availability operational requirements.

Technical Support & Systems Specialist · Avantis — Nov 2022 — Present (Concurrent)

Overseeing corporate systems administration, user support, and CRM platform stability.

- Administering cloud and server infrastructure, user credentials, access controls, and integrated communication services.
- Troubleshooting hardware, workstation networking, and software application incidents with strict SLA turnaround times.
- Standardized automated health-check procedures that reduced system downtime by over 30%.

IT Infrastructure & Systems Support Engineer · Sayama Travel — Nov 2022 — Apr 2024

Managed on-premise and regional IT infrastructure, network routing, and multi-office connectivity.

- Maintained multi-office LAN/WAN connectivity across international sites using secure VPN gateways (MikroTik, WireGuard).
- Administered physical server hardware, storage arrays, uninterruptible power supplies (UPS), and automated data backups.
- Resolved tier-2/tier-3 hardware failures, network interruptions, and peripheral issues for 100+ end-users.

Telecommunications & VSAT Field Support Specialist · Speedcast / Germsat / Regional Communications — 2010 — 2022 (12 Years)

Primary field engineer responsible for deployment, maintenance, and 24/7 emergency restoration of satellite ground stations and remote enterprise communications networks.

- **Field Commissioning & Alignment:** Installed and precision-aligned VSAT parabolic antennas (1.2m to 3.8m Ku/C-band) using spectrum analyzers and signal meters to achieve optimal carrier-to-noise (C/N) ratios.

- **Hardware Integration:** Assembled outdoor and indoor equipment: BUC (Block Upconverters), LNB (Low-Noise Blocks), orthomode transducers (OMT), satellite modems (iDirect, Comtech, Hughes), and RF interconnects.
- **Emergency Field Restoration:** Provided 24/7 on-call technical response for remote and island sites, replacing defective LNBs/BUCs, re-terminating damaged coaxial/fiber cabling, and restoring communications under severe weather conditions.
- **Network Provisioning:** Configured edge routers, managed switches, and VoIP gateways to route satellite bandwidth efficiently across remote corporate branches and industrial sites.
- **Preventative Maintenance & Safety:** Conducted routine preventative inspections, structural stability checks of mast mounts, grounding and lightning protection audits in full adherence to safety guidelines.
